

A Message from Sherry Mehl, BAR Chief

The Smog Check Program is an exceptionally important part of California's plan to help clean the air we breathe. As Chief of the Bureau, one of my responsibilities is to continually evaluate the efficiency and effectiveness of the Smog Check Program.

As you may know, the BAR-97 EIS is over ten years old. In terms of technology the BAR-97 EIS needs updating. Some of the BAR-97 EIS manufacturers have expressed concern that they will have difficulty maintaining the equipment beyond 2010. Many station owners and Smog Check technicians have expressed concern about BAR-97 and the rising maintenance and operating costs. BAR also needs to update this technology to implement some Smog Check Program improvements.

To address these long-standing issues, BAR is working to replace the BAR-97 EIS with a BAR-2010 EIS. The idea of the BAR-2010 EIS was first presented at the October 2007 BAR Advisory Group meeting.

The concept of BAR-2010 is a departure from the current BAR-97. The BAR-2010 EIS will be a PC-based system with a modular design. The modules can be replaced by the station or a BAR-approved service provider. The target date for implementing the BAR-2010 is late 2010.

As envisioned, some of the existing Smog Check equipment used by stations will be redeployed for the BAR-2010. At a minimum this will include the dynamometer and the Low Pressure Fuel Evaporative Tester (LPFET). The LPFET test results will be communicated directly to the EIS instead of the Data Depot. The BAR-2010 EIS will communicate directly with the VID through the Internet.

Once all State contracting and regulatory requirements are met, BAR's goal is to have BAR-2010 provide the following:

- Allow new vehicle types to be subject to the Smog Check Program, including vehicles equipped with the OBDII Controller Area Network (CAN) communication protocol.
- Provide software that will allow portions of the Smog Check inspection to be turned on and off based on the vehicle being tested.
- A separate screen to enter the results of the visible smoke inspection.

Developing and implementing the BAR-2010 is a major undertaking and there is a lot more work to do before BAR-2010 can be implemented. With any new undertaking, communication is a key element to success. To ensure success, BAR staff will be scheduling workshops to educate industry on BAR- 2010. These workshops are scheduled to begin in early 2009. BAR has also appointed a BAR-2010 outreach coordinator to serve as the primary point of contact with industry. He can be reached at BAR_2010TEAM@dca.ca.gov. Finally, project updates will be posted regularly on BAR's Web site at www.smogcheck.ca.gov.

I look forward to hearing your input on this project and reporting to you on our progress.

Sherry Mehl, BAR Chief

Updates on Smog Check Inspection Procedures Manual and Reference Guide

In June 2008, the Bureau of Automotive Repair (BAR) released a draft update of the Smog Check Inspection Procedures Manual and a final version of the Smog Check Reference Guide. A draft of the manual is available on BAR's Web site.

The Smog Check Inspection Procedures Manual is expected to be finalized shortly. Stations and technicians will need to follow these Smog Check inspection procedures once the regulations are finalized. Some of the major updates to the manual include:

- Visible Smoke Test Procedures. Previously, the procedure for this test could only be found in BAR regulations. The procedure is now also found in the manual.
- Low Pressure Fuel Evaporative Test (LPFET). Refinements specify that if a visual inspection failure is found on the evaporative system "tank side," the LPFET should not be performed. "Tank side" means the portion of the evaporative system between the canister seal, or pinch point, and the fuel tank filler neck. Tank side visual failures can affect the LPFET.
- Clarification of the "before test conditions" to verify normal vehicle operating temperature. In the previous manual, technicians were instructed to verify normal operating temperature and to ensure that the ignition switch had not been turned off for at least three minutes before conducting an inspection. The procedures in the new manual clarify that the engine must actually idle for three minutes at normal operating temperature immediately before inspection—rather than just be turned on. The procedures also specify that a vehicle may be idled or driven to achieve normal operating temperature.

The Smog Check Reference Guide contains information pertaining to the operation of a Smog Check station. This includes information on station and technician licensing requirements and the Consumer Assistance Program.

The guide also contains technical information concerning verification of aftermarket parts. The aftermarket parts guidelines include a new catalytic converter identification matrix that technicians can use to verify proper vehicle application.

To view and download a copy of either publication, visit BAR's Web site at www.smogcheck.ca.gov and select the Industry tab, then click on the Smog Check Manual and Guide links.

Richmond Field Office Relocates

The Bureau of Automotive Repair (BAR) is pleased to announce the relocation of the Richmond field office to Hercules effective September 1, 2008. The new office is located at 666 Alfred Nobel Ave. The phone number will remain 510.243.9410 until further notice.

On-Board Diagnostic Test Functionality for Flexible Fuel Vehicles

The On-Board Diagnostic (OBD) monitoring for Flexible Fuel Vehicles (FFVs) can be uniquely complex and challenging. In particular, OBD systems for FFVs must determine the type and, in many cases, the mix of fuel and employ appropriate management and monitoring strategies. In consideration of these complexities, the United States Environmental Protection Agency (EPA) allowed automobile manufacturers waivers from OBD monitoring during alternate fuel operation until the 2004 model year. As a result, the OBD systems for FFVs may operate and test differently than typical vehicles.

To assist states with their inspection and maintenance programs, the EPA has coordinated with automobile manufacturers to develop a list of flexible fuel vehicles that present OBD test compatibility issues. BAR has added this list of vehicles to the "OBD Technical Reference." The OBD Technical Reference can be found on BAR's Web site at www.bar.ca.gov/80_BARResources/ftp/pdfdocs/APPENDIX_J.pdf.

In addition to FFVs, the OBD Technical Reference Guide provides information about other vehicles that may have difficulty completing the OBD II functional test. The guide includes manufacturer-specific information for individual vehicle makes and models, as well as a test exception for all vehicles equipped with a Controller Area Network (CAN) and are currently incompatible with the BAR-97 OBD II functional test. When conducting a Smog Check inspection, technicians must remember that CAN-equipped vehicles cannot currently be OBD tested. To identify a CAN-equipped vehicle, check the OBD Technical Reference Guide matrix.

CAN-Equipped Vehicles Visual Identification Update

Technicians should discontinue using the pin six and 14 method as described in a previous ET Blast entitled "Identification of Vehicles with the CAN Communication Protocol." BAR recently determined that some vehicles will still have pins in the sixth and fourteenth locations of the OBD connector because the automaker installed them for proprietary reasons.

DriveHealthy.com Consumer Education Campaign

The Bureau of Automotive Repair (BAR) is committed to educating consumers about the importance of proper vehicle maintenance and how poor vehicle maintenance adversely affects the air we breathe. DriveHealthy.com is a critical component in BAR's efforts to educate consumers. Examples of this campaign can be found throughout this newsletter.

Smooth Start for Visible Smoke Test

On March 26, 2008, the Visible Smoke Test was implemented as part of Smog Check inspection procedures. Overall, implementation of the test has gone very well.

Before implementation, the Bureau of Automotive Repair (BAR) distributed smoke test training DVDs to all Smog Check stations. The video can be viewed on YouTube, or through the link provided on BAR's Web site at www.smogcheck.ca.gov/80_BARResources/04_Miscellaneous/Consumers/VisibleSmokeVideo.html.

Smog Check technicians are required to either pass or fail a vehicle for visible smoke by entering the results under the "Other Emission Related Components" category in the Smog Check Emissions Inspection System (EIS).

Because this category is used for other emissions-related failures, there is no way to capture the exact number of vehicles failing their inspection due to the Visible Smoke Test.

Nonetheless, prior to the implementation of the Visible Smoke Test, Smog Check technicians failed an average of 15 vehicles per day under the "Other Emission Related Components" category. After implementation of the Visible Smoke Test, approximately 60 "Other Emission Related" failures per day were reported. This is an increase of approximately 45 vehicle failures per day. When the daily results are used to project the number of failures over a full biennial cycle, an estimated 33,000 vehicles may be expected to fail the Visible Smoke Test.

Vehicle Retirement Program Set to Expand

In 2007, the Legislature passed and Governor Schwarzenegger signed into law Assembly Bill (AB) 118 (Chapter 752). The bill, entitled the California Alternative and Renewable Fuel, Vehicle Technology, Clean Air, and Carbon Reduction Act of 2007, is a significant piece of legislation designed to improve air quality. Among other things, this bill is designed to achieve the low-carbon fuel standard currently under development by the California Air Resources Board (ARB). The bill provides the funding and incentives necessary for the research, development, and deployment of clean alternative fuels.

One element of AB 118 creates the Enhanced Fleet Modernization Program for the voluntary retirement of high polluting vehicles. This retirement program is to be administered by BAR and will complement BAR's existing vehicle retirement program. The new program is to be funded through an increase in the vehicle registration fee.

AB 118 requires BAR to administer the program pursuant to regulations established by ARB. The regulations must ensure the following:

- Permanently retire vehicles through a BAR-contracted dismantler
- Target areas of the state that would benefit most
- Provide for flexible compensation to consumers based on the age of the vehicle, the emissions reduction benefits, the emissions impact of any replacement vehicle, and the location of vehicles in areas with the poorest air quality
- Consider cost-effectiveness and impacts on disadvantaged and low-income consumers

In May 2008, ARB in cooperation with BAR conducted the first of several workshops to hear public comment on the development of regulations for the program. ARB's regulations should be adopted by spring 2009, and the program will be operational on January 1, 2010.

For more information about the expanded vehicle retirement program, visit ARB's Web site at www.arb.ca.gov.

Automotive Repair Dealer Registration Prefix Change

The Bureau of Automotive Repair (BAR) recently notified Automotive Repair Dealers (ARDs) about changes in registration prefixes due to a conversion in its licensing database. Many ARDs and vendors that produce these forms have sought clarification from BAR regarding these changes.

According to Title 16, California Code of Regulations section 3356, an "invoice shall show the dealer's registration number and the corresponding business name and address. . ." Previously, BAR registration numbers included a six-digit number preceded by two alpha-characters. Under the new system, while the six digits will remain the same, the two alpha-characters will change to "ARD." For example, if your invoice previously listed your registration number as BAR #AB123456, it will now be BAR #ARD123456.

It should be noted that this will not affect your EIS or Low Pressure Fuel Evaporative tester. The change in the license number does not affect the unit's performance.

BAR is working on regulations to clarify these requirements. These regulations should be adopted some time this year.

At this time, BAR will not take enforcement action against an ARD for using either the former or new registration number on the invoice.

BAR requests that all ARDs use the new registration once your current invoice stock is exhausted.

If you have questions about the registration prefix change, please call BAR's Licensing Unit at 916.255.3145.

DragNet Program Crushes Illegal Street Racing Cars

The word is out on the streets: take part in illegal street racing and you could lose your ride.

Two vehicles stopped by DragNet-trained peace officers during an illegal street race in Elk Grove were found to have stolen engines and transmissions and highly modified emission controls. They were subsequently ordered destroyed by the court. Crushing the cars not only removed potential safety threats from the roadways, but it also removed significant emissions from the air as well.

The DragNet program is a partnership between the California Office of Traffic Safety, state and local law enforcement and BAR. The program has been very successful in identifying illegal vehicles that put the public in danger and excessively pollute the air.

BAR Chief Sherry Mehl says "It has been a privilege for BAR to participate in the DragNet program. I am very proud of my staff and the effort they have put into this program. BAR has helped train over 8,000 peace officers throughout the State."

The unnecessary deaths associated with illegal street racing continue to climb, and they have claimed the lives of too many Californians.

The DragNet program demonstrates law enforcement's commitment to aggressively identify these illegal cars, and judges are increasingly ordering these

vehicles destroyed. The message is this: If you race on the street, law enforcement will find you. And when they do, you face significant civil and criminal penalties all the way up to the loss of your car.

BAR Chief Sherry Mehl (center) at a press conference with local law enforcement official in Elk Grove where a vehicle seized through the DragNet program is crushed.

Department of Consumer Affairs' PACT Summit Scheduled for November

The Department of Consumer Affairs and the California Consumer Affairs Association are pleased to announce the first-ever Professionals Achieving Consumer Trust (PACT) Summit.

This Summit will provide stakeholders, consumer advocates, and law enforcement agencies an opportunity to discuss issues that impact consumers and licensees, and presents participants a unique opportunity to share best practices, leverage resources, and build partnerships. Workshops

scheduled throughout the four-day event will cover topics of interest to consumers and stakeholders alike. Anyone interested is encouraged to attend.

The Summit will run from November 18 through 21 at the Westin at the Los Angeles International Airport. For more information and to register online, please visit www.dca.ca.gov.

**Deflate our air pollution...
Inflate your tires.**

Get on the BAR Mailing List

The Bureau of Automotive Repair (BAR) maintains several mailing lists of interested parties who have asked to receive information such as notices, bulletins, newsletters, workshop flyers, and other items related to BAR operations.

BAR maintains a Regulatory Actions Notice Interested Parties mailing list. In accordance with Government Code section 14911, BAR is also required to correct, verify, and update this list annually. The list is primarily used to mail regulation hearing notices, regulation workshop invitations, informational meeting invitations, and other miscellaneous information.

The Regulatory Actions Notice list is **not** used for mailing the *Auto Repair & Smog Check News*. Requests to be added to the newsletter mailing list are often confused with the Regulatory Actions Notice list. To help BAR staff direct mailing list requests to the correct location, we have provided a form for you to fill out. If you are a licensed Smog Check technician or a registered Automotive Repair Dealer (ARD), you are automatically placed on the list that is used to mail the newsletter and other official notices. As a result, you should already be receiving the newsletter.

Here's how to choose the mailing list that provides the information in which you're most interested. First, choose whether you wish to be placed on the

newsletter or the Regulatory Actions Notices mailing list. You may select both, if you want to receive both.

If you elect to be placed on the Regulatory Actions Notices mailing list, you may further refine the information you want to receive by selecting from any of the sub-categories listed below. For example, if you select "General" you will receive information, invitations, and notices from all categories, but if you select "Smog Check" you will only receive information, invitations, and notices related to the Smog Check Program.

If you are not already on these mailing lists and wish to be added, sign up by completing the form below and faxing it to 916.255.1369, or complete, detach, and mail it to: Bureau of Automotive Repair, Attn: Mailing Lists, 10240 Systems Parkway, Sacramento, CA 95827.

If you are already on any of BAR's mailing lists and want to remain on those lists, you do not need to take any action. As required by Government Code 14911, an annual update notification will be mailed to you during January or February of each year to confirm that you wish to remain on the Regulatory Actions Notices mailing list. BAR is planning on updating the newsletter mailing list in the near future.

Please select one or more of the following subjects. If no subject is selected, "General" will be used. Please complete, detach and return.

Auto Repair & Smog Check News

Regulatory Actions Notices

(If you select this, designate the subjects you're interested in below)

- General (includes all auto repair)
- Auto Body Repair
- Smog Station
- Equipment Manufacturer
- Automotive Air Conditioning
- Automotive Repair (includes all Smog Check)
- Lamp/Brake Station
- Smog Technician
- Consumer Assistance Program
- Other (Please specify):
- Smog Check (includes all subjects)
- Lamp/Brake Technician
- Educational Institution/Instructor
- Automatic Transmissions

We Get Questions on.... Adding a Station to an Auto Repair Dealer Registration

What type of station(s) may I add to an existing Automotive Repair Dealer Registration (ARD)?

- **Smog Check station** - This includes Test-Only, Test-and-Repair, and Gold Shield stations and all must be equipped to perform Smog Check inspections.
- **Lamp station** - Official lamp adjusting stations must be equipped to test, inspect, adjust, and repair all lamps and related electrical systems on all vehicles.
- **Brake station** - Classes of official brake adjusting stations are established as follows:

Class A - Official brake adjusting stations must be equipped to test, inspect, adjust, and repair all brakes and brake systems on all vehicles.

Class B - Official brake adjusting stations must be equipped to test, inspect, adjust, and repair all brakes and brake systems on all buses, trucks, truck tractors, trailers, and semi-trailers.

Class C - Official brake adjusting stations must be equipped to test, inspect, adjust, and repair all brakes and brake systems on all trucks or truck tractors having a manufacturer's gross vehicle weight rating of less than 10,000 pounds, all trailers and semi-trailers that do not use compressed air or vacuum to actuate the brakes, and all passenger vehicles including motorcycles and motor-driven cycles.

How do I apply for a station license?

In order to add a smog, lamp or brake station to your existing ARD you must submit the correct application along with the applicable fees. The applications can be downloaded by visiting BAR's Web site at www.smogcheck.ca.gov or by calling the Department of Consumer Affairs at 800.952.5210 or BAR at 916.255.3145.

Licenses will be issued only after a BAR representative performs an on-site inspection of the station to confirm that the applicant meets the qualifications prescribed by regulations.

What are the fees for an initial station license?

The fee schedule of station licenses is as follows:

Station Type	Initial Fee	Renewal Fee	Delinquent fee
Smog	\$100.00	\$100.00	\$50.00
Lamp	\$10.00	\$ 5.00	\$ 2.50
Brake	\$10.00	\$ 5.00	\$ 2.50

If I want to open a Smog Check Test-Only station and a Smog Check Test-and-Repair station, are there any restrictions?

A Smog Check Test-and-Repair station may not have ownership, corporate interest in, nor any financial interest in a Smog Check Test-Only station within a geographical radius of 50 miles of the test-and-repair station.

Can I change my Smog Check station type?

If you wish to change the designation of your Smog Check station (i.e. from Test-and-Repair to Test-Only or vice versa) you will need to submit a new application and SGS forms, and pay the appropriate fees. Also, you will need to specify when you want the change to take effect. Please be aware that there will be some "down time" while BAR processes the change and schedules an inspection. You will be unable to perform Smog Check inspections during this time.

What if I move my station?

A registrant or licensee must notify the Bureau within 14 days of any change in either the mailing or street address. You can obtain a change of address form by visiting BAR's Web site at www.smogcheck.ca.gov or by calling BAR at 916.255.3145. There is no fee for changing your address. However, if you own a Smog Check and/or a lamp and brake station and file a change of address, a BAR representative must inspect the new location prior to you being able to perform an inspection.
